Exit Destinations

Why is Exit Destination Data Quality Important?

If exits are not recorded, the active list is inflated

This can lead to fewer prioritization opportunities for those truly experiencing homelessness.

Accurate **Exit Destinations** capture **Length of Time** measures – specifically length of enrollment and length of episode.

This can affect the client's eligibility for resources and program performance.

Increasingly, stakeholders want to understand not only how many households we connect to housing, but how fast and how efficiently can we do so

Length of time measures also help us get a sense for how households experience the system and how often they need services

HUD Data Standards Say:

"...the client's 'Destination' is about where they are staying, not necessarily about why they are staying there. The destination will depend on the specifics of the situation, but it is important to select a destination response that reflects the true nature of the situation."

HUD Data Standards (3.12, Pg. 61-63)

A diagram with a dark blue background. At the top center is a light blue box labeled 'Destinations to Homeless Situations'. A horizontal line extends from this box to the left and right. Below this line are three more light blue boxes. The left box is connected to the horizontal line by a vertical line. The middle box is connected by a vertical line. The right box is connected by a dashed line. In the background, there is a large, faint, stylized map pin icon on the right and a large, faint, stylized compass rose icon on the left.
